ADD8 7924 g à 셤

New secreted and transmembrane nucleic acids and polypeptides, designated as PRO, useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, or cancer. Claim 2; Fig 375; 637pp; English.

ž

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TWP-alpha) from human blood, a method for stimulating the factor-alpha (TWP-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The olymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antiscence RNA and DNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are used in preparing a condition responsive to the polypeptides or medicament for treating a condition responsive to the polypeptides or

antibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular endothalial cells, for modulating the uptake of glucoseo or FRA by skeletal muscle cells, for modulating the uptake of cluscose or FRA by skeletal muscle cells, for stimulating termination of adjacothe cells, for stimulating proliferation of inner ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and carthitis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, arthoriar cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides are also useful for treating various mammalian haemoglobin associated disorders such as various thalassaemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polynucleotide of the invention. Note: The sequence data for this patent is also available in electronic format from USPTO at sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    480

in or New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO1114 PRO4978, useful in molecular biology, chromosome and gene mapping, generating antisense RNA and DNA, and in gene therapy.

Claim 2; Fig 375; 637pp; English

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis conjugation or stimulating the release of tumour necrosis and profiferentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrean). Hung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colymucleotides are useful in molecular biology, including uses a polymucleotides are useful in molecular biology, including uses a colon breast, prostate, proplypeptides by recombinant techniques and in antisense RNA and bunk and in gene therapy. The polymucleotides may also antisense RNA and bunk and screening or knock-out animals which are useful in the development and screening or knock-out animals which are useful in the development and screening or knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of the polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or fundation of organization of adipocyte cells, for stimulating proliferation of organization of adipocyte cells, for stimulating cells or 1-lymphocyte cells, for inducing endothalial cells or adipocyte cells, for stimulating cells or 1-lymphocyte cells, for inducing endothalial cells or adipocyte cells, for stimulating defeates of from cartilage are useful for treating sports related joint problems or the proliferation of inner ear utricular such as sports injuries and cartilage defects, ost-osatharitis and rheumatoid arthritis. PRO polypeptides which stimulassaemias and conditions or associated disorders such as various thalassaemias and conditi

                                                                                                                                                                                                          transmembrane polypeptide) and the PRO polymucleotides encoding them.

The PRO polypeptides and polymucleotides are useful as pharmaceuticals, detecting tumours or interactors. They are particularly useful for detecting tumours or in blosensors or bloreactors. They are particularly useful for detecting tumours or liver tumour, breast tumour, colon tumour, breast tumour, colon tumour, breast tumour, for stimulating the release of tumour necrosis factor (TNF)-alpha from human blood, for stimulating the proliferation of chondrocyte cells, for stimulating the proliferation of or gene capression in perioyte cells of or stimulating the proliferation of or gene confidence to the proliferation of or gene confidence to the proliferation of or gene capression in perioyte cells or for stimulating the proliferation of or gene confidence NMA and DNA, in preparing PRO notleds by recombinant confidence NMA and DNA, in preparing PRO polypeptides by recombinant celhology, in generating transgenic animals or knock-out animals which reagents, in generating probes. The PRO polypeptides, or anti-PRO antibodies, are useful for preparing a medicament for treating a medicament for treating a medicament for treating or anti-PRO antibodies, such as perioyte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the recombined medical such as perioyte-associated tumours and bone and/or cartilage confiderentiation of chondrocytes. The PRO polypeptides are useful as molecular markers and in tissue typing. This sequence represents a human PRO polypeotide, and in tissue typing. This

```
The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polynucleotides encoding them.

The PRO polypeptides and polynucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TNF)-alpha from human blood, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the proliferation of or gene comman in periotyce cells or for stimulating the proliferation of normal human dermal fibroblasts. The PRO nucleic acids are useful as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO polypeptides by recombinant technology, in generating transgenic animals or knock-out animals which may be used in the development and screening of therapeutically useful reagents, in gene therapy, in chromosome identification, as chromosome

markers and in generating probes. The PRO polypeptides, or anti-PRO antibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as perioyte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the redifferentiation of chondrocytes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polymucleotide of the invention. Note: The sequence data for this patent is also available in electronic format

New secreted and transmembrane PRO polypeptide and nucleic acid encoding it, for use in gene therapy, as diagnostic markers for the presence of a disease condition, or as therapeutic targets for treating tumors, diabetes, or arthritis.

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, confidencing the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses a prisense RNA and BNA and in Gene therapy. The polymucleotides may also a thybridisation probes, in chromosome and gene mapping, in generating colon, breast, prostate and screening recombinant techniques and in the development and screening of the polypeptides by recombinant techniques and in the development and screening of knock-out animals which are useful in the development and screening of therapyurically properties or medicament for treating a condition responsive to the polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or stimulating differentiation of condition responsive cells, for scimulating of thuman microvascular muscle cells for modulating the uptake of stimulating differentiation of adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating cells or T-lymphocyte cells, for inducing endothelial cells or adipocyte cells, for stimulating and condition and for treating entrative and surfaciles and such as various home and/or cartilage defects, osteoarthritis and rhemmedologic cells. The problement and such as various thalassaemias and condition. The sequence tepresents a human PRO polymucleotide or the invention. Note: cells from usproporate or thin parent is also available in electronic formation. The sequence ceptaence data for this patent is also

New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO4993 or PRO337, useful in molecular biology, chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy.

Claim 2; SEQ ID NO 522; 460pp; English.

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to a manno acid sequence flower 180% amino acid sequence identity contains a manno acid sequence flower 180% amino acid sequences as given in the specification (including PRO lacking its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule comprising antibody. PRO337 polypeptide is useful for detecting a PRO4933 polypeptide is useful for detecting PRO337 polypeptide is useful for detecting pRO4933 polypeptide is useful for detecting pRO355 polypeptide. The PRO1555 polypeptide is useful for detecting PRO355. PRO700 or PRO139 polypeptide is useful for inking a bloactive molecule to a cell expressing PRO377 polypeptide. The bioactive molecule call expressing PRO4933 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO4933 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO4933 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO4933 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO4933 polypeptide is useful for linking a bloactive molecule con a cell expressing PRO4933 polypeptide is useful PRO325, PRO700 or PRO739 polypeptide are useful for linking a bloactive molecule con a cell expressing PRO4933 polypeptide is useful for linking a bloactive molecule is useful for modulating at least one biological activity of the cell expressing PRO4933 polypeptide, where the cell is killed, PRO337 polypeptide is useful for modulating at least one biological activity of the cell expressing PRO49337 polypeptide, where the cell is killed, PRO337 polypeptide is useful for modulating at least one biological activity of the cell expressing PRO49337 polypeptide.

polypeptide or anti-PRO4993 polypeptide is useful for modulating the biological activity of the cell expressing PRO4993 polypeptide; PRO725, PRO700 or PRO739 polypeptide or an anti-PRO1559 polypeptide is useful for modulating the biological activity of the cell expressing PRO1559 polypeptide; and PRO1559 polypeptide or anti-PRO725, anti-PRO700 or anti-PRO39 polypeptides and PRO1559 polypeptide or anti-PRO725, anti-PRO700 or anti-PRO739 polypeptides activity of the cell expressing PRO725, PRO700 or PRO739 polypeptide. The polypeptides are useful for inhibiting tumour growth, retinal disorders, sports-related joint problems, arthular cartilage defects, osteoarthritis or rheumatoid arthritis, wound healing and hearing loss in mammals. The present sequence encodes a PRO protein. 888888888888888888

New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO205 or PRO214, useful in molecular biology, chromosome and gene mapping, in generating antisense RNA and DNA, and for treating disorders involving anglogenesis.

Claim 2; SEQ ID NO 55; 492pp; English

transmembrane polypeptide (PRO). The nucleic acid encoding a secreted and transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded by the nucleic acid, or an agonist or antagonist, is used to treat a cardiovascular, endothelial, or angiogenic disorder in a mammal, preferably a human. The human may have suffered a myocardial infarction or has cardiac hypertrophy, trauma, a cancer, or age-related macular degeneration. The cardiac hypertrophy is characterised by the presence of an elevated level of PGP-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial cell growth in a mammal. PRO21 or an agonist is used to induce cardiac hypertrophy. PRO1376 or PRO1499 is used to stimulate angiogenesis. PRO4302 or an agonist is used to induce endothelial cell apoptosis. A PRO polypeptide, given in the specification, or an agonist is used to induce endothelial cell upoptosis. A propertrophy given in the specification, or an agonist is used to stimulate or inhibit smooth muscle cell growth, or to induce endothelial cell tube formation. The present sequence represents a cDNA encoding a propertic of the invention.

Sequence 1679 BP; 498 A; 432 C; 419 G; 330 T; 0 U; 0 Other;

cells, for inducing endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides are also useful for treating various mammalian haemoglobin-associated disorders such as various thalassaemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence encodes a human PRO polypeptide of the invention. Note: The sequence data for this patent is also available in electronic format from the USPTO website at segdata.uspto.gov.

New secreted and transmembrane nucleic acids and polypeptides, designated as PRO, useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, or

Claim 2; Fig 375; 637pp; English.

cancer.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TMF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as thrist assence, in chromosome and gene mapping, in generating christalsation probes, in chromosome and gene mapping, in generating antisense RNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in useful in the development and screening of therapeutically useful responsive to the polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides of medicament for treating a condition responsive to the polypeptides of medicament for treating and inhibiting proliferation of thuman microvascular endothelial cells, for modulating the uptake of glucose or FRA by skeletal muscle cells for stimulating proliferation of adipocyte cells, for stimulating proliferation of adipocyte cells, for stimulating proliferation of inner ear utricular supporting cells or T-lymphocyte

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polypucleotides encoding them.

Cr The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, colon tumour, breast tumour, rectail tumour or liver tumour) in ammman! for stimulating the release of tumour necrosis factor (TNF) alpha from human confusion to the stimulating the proliferation of or gene conditions of stimulating the proliferation of or gene expression in pericyte cells or for stimulating the proliferation of confusion probes, in chromosome and gene mapping, in generating cartisense RNA and DNA, in preparing PRO polypeptides by recombinant technology, in generating transgenic animals or knock-out animals which may be used in the development and screening of therapeutically useful cragents, in gene therapy, in chromosome identification, as chromosome markers and in generating probes. The PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the recondition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte associated tumours and bone and/or cartilage condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte associated tumours and bone and/or cartilage condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte associated tumours and bone and/or cartilage condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte associated tumours and bone and/or format sequence data for this patent is also available in electronic format conditions and proper process. The proper process of the respective of the respection of the process of the sequence

New secreted and transmembrane PRO polypeptide useful for preparing medicament for treating a condition that is responsive to the PRO polypeptide or anti-PRO antibody, e.g. cancer.

Claim 2; Fig 125; 308pp; English

The PRO polypeptides) and the PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polymucleotides encoding them.

The PRO polypeptides and polymucleotides are useful as pharmaceuticals, deacting tumours described are useful as pharmaceuticals, detecting tumours end ploymucleotides are particularly useful for deacting tumour, rectal tumour or liver tumour) in a mammal, for stimulating the proliferation or differentiation of conditions in pericyte cells of tumour necrosis factor (TNF) alpha from human conditions and proliferation of conditions in pericyte cells or for stimulating the proliferation of condition probes, in chromosome and gene mapping, in generating contisense RNA and DNA, in preparing PRO polypeptides by recombinant technology, in generating transgenic animals of knock-out animals which may be used in the development and screening of therapeutically useful condition which is responsive to the PRO polypeptides, or anti-PRO antibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage condition of chondrocytes. The PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the recondition of chondrocytes. The PRO polypeptides are useful as sequence associated tumours and bone and/or cartilage molecular markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptide, and in tissue typing. The sequence represents a human PRO polypucide of the invention. Note:

The sequence data for this patent is also available in electronic format seqdata.uspto.gov/sequence.html

human; secreted and transmembrane protein; PRO; gene; ss; cytostatic; vulnerary; antiatrhitic; pericyte cell proliferation; pericyte cell differentiation; chondrocyte cell proliferation; chondrocyte cell differentiation; tumour necrosis factor alpha release; Novel human secreted and transmembrane protein PR0337 cDNA ADD76064 standard; cDNA; 1679 BP (first entry) 29-JAN-2004 ADD76064; RESULT 143

The invention describes an isolated PRO (secreted and transmembrane)

polypeptide (1). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are
useful for stimulating the proliferation of or gene expression in

pericyte cells. PRO357, PRO725, PRO1252 polypeptide are useful

for stimulating the proliferation or differentiation of chondrocyte

cells. PRO231, PRO357, PRO725, PRO1155, PRO1196, PRO1419, PRO1419,

WPI; 2004-008971/01. P-PSDB; ADD85557.

New secreted and transmembrane PRO polypeptides and nucleic acids, useful in gene therapy, or for preparing a medicament for treating a condition that is responsive to the PRO polypeptide or anti-PRO antibody, e.g. cancer.

Claim 2; SEQ ID NO 125; 308pp; English.

The invention describes an isolated PRO (secreted and transmembrane)

Dolypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are

useful for stimulating the proliferation of or gene expression in

periotyce cells. PRO357, PRO222, PRO1272 or PRO465 polypeptide are useful

cor stimulating the proliferation of differentiation of chondrocyte

cells. PRO357, PRO525, PRO1356, PRO3136, PRO1419, PRO1419,

New secreted and transmembrane nucleic acids and polypeptides, designated as PRO, useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, or

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) From human blood, a method for stimulating the polypeptide, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, coroliferation or differentiation of chondrocyte cells and a method for oproliferation probes, in chromosome and gene mapping, in general, proposed, in gene therapy. The polymucleotides may also a stiesnase RNA and blook polypeptides by recombinant techniques and in generating propolypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful cueful in the development and screening of therapeutically useful cueful in the development and screening of therapeutically useful antibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular modothelial cells, for modulating the uptake of glucose or FRA by skeletal muscle cells, for modulating the uptake of glucose or FRA by skeletal muscle cells, for stimulating differentiation of angipocyte cells, for stimulating cells or T-lymphocyte cells, for inducing endothelial cells or adjpocyte cells, for stimulating and preparation of angipocyte cells, for stimulating cells or T-lymphocyte cells, for inducing endothelial cells or adjpocyte cells, for stimulating and cartilage are useful for treating various mammalian hammolobies.

Colypeptides are also useful for treating various mammalian hammolobien and svarious mammalian hammolobien and svarious thalassaemias and condition. Note: The sequence and for this patent is also available in electronic format from cartilage at sequence and svarious thalassaemias and conditions of the useful for treating various cells in electronic format cell

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymuclectides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TWF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for colin, breast, prostere, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antibation proparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of krazgeurically which are useful in the development and screening of the preparing a condition responsive to the polypeptides or medicament for treating a condition responsive to the polypeptides or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New secreted and transmembrane nucleic acid useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, acquired immunodeficiency syndrome, or cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 2; Fig 375; 637pp; English.

ductoures, such as uniques, tor standarding and intributing proliteration of thuman microvascular endothelial cells, for modulating the uptake of glucose or FRA by skeletal muscle cells or adipocyte cells, for stimulating contribution of dispocyte cells, for stimulating proliferation of or gene expression in pericyte cells, for stimulating colliferation of inner ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, or articular cartilage defects, osteoathritis and rheumatoid arthritis. PRO polypeptides are also useful for treating various mammalian haemoglobinmay benefit from enhanced local immune system cell infiltration. This sequence date for this patent is also available in electronic format from the format from the from control of the patent is also available in electronic format from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  900
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             600

in in New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO1114 PRO4978, useful in molecular biology, chromosome and gene mapping, generating antisense RNA and DNA, and in gene therapy.

Claim 2; Fig 375; 648pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNT-alpha) from human blood, a method for stimulating the present at unour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polynucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating at the certain probes, in chromosome and gene mapping, in generating at the transgenic animals or knock-out animals which are used in preparing PRO polypeptides by recombinant techniques and in generating ather transgenic animals or knock-out animals which are used in the development and screening of therapeutically useful ragents. The PRO polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating differentiation of adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating condifferation of antibodies, such as tumours, for stimulating and inhibiting proliferation of inner ear utricular supporting cells, for stimulating condifferation of alivorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of protecglycans from arthidise are also useful for treating sports related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. Reconsidered and sorders such as sports injuries and associated disorders such as various thalassameias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polymorpetide of the invention. Note:

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polymucleotides encoding them.

The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for prostate tumour, reclaid tumour or liver tumour, breast tumour, prostate tumour, cells that the proliferation of prostate tumour or liver tumour) in amammal, for prostate tumour or liver tumour) in amammal, for prostate tumour cells, for stimulating the proliferation of or gane chood, for stimulating the proliferation of or gane expression in pericyte cells, for stimulating the proliferation of or gane ormal human dermal fibroblasts. The PRO nucleic acids are useful as hybridisation probes, in chromosome and gene mapping, in generating an expension in preparing transgenic animals or knock-out animals which can be used in the development and screening of therapputically useful reagents, in generating probes. The PRO polypeptides, or anti-PRO antibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage disferentiation of chondrocytes. The PRO polypeptides are useful as markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polymeptides are useful as markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polymeptides. New secreted and transmembrane PRO polypeptides and nucleic acids, useful in gene therapy, or for preparing a medicament for treating a condition that is responsive to the PRO polypeptide or anti-PRO antibody, e.g. Sequence 1679 BP; 498 A; 432 C; 419 G; 330 T; 0 U; 0 Other; Claim 2; Fig 125; 308pp; English 05-JUN-2000; 2000US-0209832P. 15-SEP-2000; 2000US-0232887P. 01-JUN-2001; 2001WO-US017800. 29-JUN-2001; 2001WO-US021066. 09-APR-2002; 2002US-00119480. The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TRP-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colymelation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colymclectides are useful in molecular bology, including uses as an including uses as an including uses as an including sense that an operating such an opyreptides by recombinant techniques and in preparing PRO polypeptides by recombinant techniques and in preparing properties or antibodies are used in preparing a constituing of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing of the properting a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating of the polypeptides or attribodies, such as tumours, for stimulating of medicament for treating and some cells, for modulating the uptake of glucose or FRA by skeltal muscle cells, for modulating the uptake of simulating of finer ear utricular supporting cells, for stimulating the proliferation of alpocyte cells, for stimulating cells or arthritis. PRO polypeptides which stimulate the release of prorecoglycans from carthiage and endor cartilage disorders such as sports related joint problems, arthritis. PRO polypeptides which stimulate the release of prorecoglycans from cartilage are useful for treating sports related joint problems, arthritis. PRO polypeptides which stimulate and subject to a secure of the invention. One sequence represents a human PRO polypulates and also useful for treating sports cells, for the invention. One of the sequence represents a human PRO pol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 GTTGTGTCCTTCAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAAACCACA

New isolated, secreted and transmembrane PRO polypeptides and nucleic acids, useful for diagnosing, preventing and/or treating diabetes mellitus and tumors, such as renal, colon, breast, prostate and/or

Claim 1; SEQ ID NO 103; 259pp; English.

The invention relates to an isolated secreted/transmembrane PRO polypeptide. The polypeptide and its nucleic acid is useful as an inhibitor of vascular endothelial growth factor stimulated proliferation of endothelial cells, as a stimulator of T-lymphocyte proliferation, as an inducer of endothelial cell apoptosis, c-fos and differentiation of pancreatic beta cell precursors into mature cell, for induction of redifferentiation and/or proliferation of chondrocytes and for modulating glucose or free fatty acid (FFA) uptake by skeletal muscle cells. The polypeptide and its nucleic acid is useful for generating transgenic or knock-out animals, for tissue typing and for chromosome identification. The polypeptide is useful in a number of functional biological assays, as molecular weight marker for protein electrophoresis, and as therapeutic dynomosome and gene mapping, in the generation probe in chromosome and gene mapping, in the generation of antisense RNA and DNA, and for the preparation probe for a cDNA library to isolate the full length PRO cDNA, to isolate other cDNA and in gene therapy. The nucleic acid is also useful to the construction of hybridisation probes for mapping the gene conductor and for the genetic analysis of individuals with the generatic disorders. The present sequence represents a cDNA encoding a human secreted/transmembrane PRO polypeptide.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adream), lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymiclectides are useful in molecular biology, including uses as hybridisation probes, in chomosome and gene mapping, in generating cartisanse RNA and BNA and in Gene therapy. The polymiclectides may also a streams that transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful.

CC generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful.

CC generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful.

CC generating either transgenic animals or knock-out animals which are useful in the development and screening of the modulating the upractical of human microvascular endothelial cells, for modulating the uptake of glucose or FRA by skeletal muscle cells, for modulating the uptake of grainlating differentiation of adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating and confiring endothelial cells, for modulating the uptake of stimulating differentiation of adipocyte cells, for stimulating and cartinities are austiled for treating such as sports injuries and articular cartilage are useful for treating sports cells, for stimulating defects, outcoarthritis and rhemmedical are also useful for treating sports represents a human PRO polymulassammalian hamoed local immune system cell infilteration. This sequence represents

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, certoral and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, corporation or differentiation of chondrocyte cells and a method for proliferation probes, in Chromosome and gene mapping, in generating colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hypridisation probes, in Chromosome and gene mapping, in generating a their transgenic animals or knock-out animals which are a training either transgenic animals or knock-out animals which are useful in the development and socreming of therapeutically useful cagents. The PRO polypeptides or antibodies are used in preparing a tumours, for stimulating of herapeutically useful cagents. The PRO polypeptides or antibodies are used in preparing a tumours, for stimulating and inhibiting proliferation of thuman microvascular endothalial cells, for modulating the uptake of glucose or PRA by skeletal mussle cells or adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating and condition such an analyze the proliferation of an expression in pericyte cells, for stimulating cells or traiting each or finner ear utricular supporting cells, for stimulating the proliferation of finner ear utricular supporting cells, for stimulating and cartilage are useful for treating sports. For pulpaptides are lasto useful for treating various mammalian hammed cartilage are useful for treating various mammalian hammed local immune system cell infilteration. This sequence represents a human PRO pol 3 Gaps Gao Baker KP, Beresini M, Deforge L, Desnoyers L, Filvaroff E, G: Gerritsen ME, Goddard A, Godowski PJ, Gurney AL, Sherwood S; Smith V, Stewart TA, Tumas D, Watanabe CK, Wood WI, Zhang Z; ö Query Match

gene therapy.
```

```
The invention describes an isolated PRO (secreted and transmembrane)

CD polypeptide (1). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are
useful for stimulating the proliferation of or gene expression in

Useful for stimulating the proliferation or of gene expression in

EC stimulating the proliferation or differentiation of chondrocyte

New secreted and transmembrane PRO polypeptides and nucleic acids, useful in gene therapy, or for preparing a medicament for treating a condition that is responsive to the PRO polypeptide or anti-PRO antibody, e.g. cancer.

claim 2; SEQ ID NO 125; 308pp; English.

The invention describes an isolated PRO (secreted and transmembrans)

CC polypeptide (1) PRO982, PRO1180, PRO1187 or PRO11829 polypeptide are useful for stimulating the proliferation of or gene expression in periotyte cells. PRO982, PRO1272 or PRO4405 polypeptide are useful for stimulating the proliferation of differentiation of chondrocyte cells. PRO387, PRO725, PRO1185, PRO1180, PRO1181, PRO1180, PRO1181, PRO1180, PRO1181, PRO118

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polymucleotides encoding them.

The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for diagnostics, biosensors or bioreactors. They are particularly useful for diagnostics, biosensors or bioreactors. They are particularly useful for construct tumour, rectal tumour or liver tumour, breast tumour, rectal tumour or liver tumour) in a mammal, for stimulating the proliferation of the proliferation of chondrocyte cells, for stimulating the proliferation of chondrocyte cells, for stimulating the proliferation of chondrocyte cells for stimulating the proliferation of chondrocyte cells for stimulating the proliferation of chondrocyte cells or for stimulating the proliferation of chondrocyte cells in chromosome and gene mapping, in generating franspania properious by recombinant tendency and part of the cells of the properious of the proliferation of the cells of the properious of the properious of the condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage differentiation of chondrocytes. The PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage differentiation of chondrocytes. The PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and sore represents a mammal PRO polypeptides are useful as molecular markers for protein electrophoresis, and in tissue typing. This sequence expresents a buman PRO polyperion of the invention. Note: The sequence data for this patent is also available in electronic format

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polymucleotides encoding them.
The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, condition, rectal tumour or liver tumour) in amammal, for prostate tumour, rectal tumour or liver tumour) in amammal, for stimulating the proliferation of for gene conditions to stimulating the proliferation of or gene expression in perioyte cells or for stimulating the proliferation of or gene expression in perioyte cells or for stimulating the proliferation of or gene expression in periops. The PRO nucleic acids are useful as hybridiation probes, in chromosome and gene mapping, in generating transgenic animals or knock-out animals which may be used in the development and screening of therappentically useful cragents, in gene therapy, in chromosome identification, as chromosome markers and in generating probes. The PRO polypeptides or anti-PRO markers and in generating probes. The PRO polypeptides or anti-PRO antibodies, such as perioyte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducting the recondition which is responsive to the PRO polypeptides are useful as molecular markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polymological provention. Note:

The sequence data for this patent can also be obtained in electronic format directly from USPTO at sequence. Once the condition which is responsive to the sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240

Baker KD, Desnoyers L, Gerritsen ME, Goddwski PJ; Grimaldi JC, Gurney AL, Smith V, Stephan JF, Watanabe CK, Wood WI; P-PSDB; ADD77109.	New secreted and transmembrane PRO polypeptides and nucleic acids, useful in gene therapy, or for preparing a medicament for treating a condition that is responsive to the PRO polypeptide or anti-PRO antibody, e.g. cancer. Claim 2, SEQ ID NO 125; 308pp; English. The invention describes an isolated PRO (secreted and transmembrane) polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are useful for stimulating the proliferation of or gene expression in pericyte cells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are useful for stimulating the proliferation of differentiation of chondrocyte cells. PRO351, PRO357, PRO125, PRO1156, PRO1160, or PRO1419, polypeptide are useful for stimulating the release of tumour necrosis factor (TNF) alpha from human blood. PRO982, PRO357, PRO725, PRO1306, PRO1419, PRO214,

ö the PRO polypeptides in the test sample as compared to the control sample is indicative of the presence of tumour in the mammal. The tumour is lung tumour, colon tumour, colon tumour, prostate tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polymuclectide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO259, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, PRO 2011) and transmembrane and transmembrane 240 540 120 120 180 240 300 360 360 420 420 480 480 600 600 999 99 720 720 780 780 840 9 60 61 AATCTATCAGGAAAGAAAGAAAAAAAAAACCGAACCTGACAAAAAAAGAAGAAAAAGA 121 AAGAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTTTGGGCAAT 241 CACCTTCCCCAAAGCTATGGACAACGTGACGTCCGGCAGGGGGAGAGCGCCACCTCAG CACCTICCCCAAAGCTATGGACAACGTGAGGTCCGGCAGGGGGGAGAGAGCCCACCTCAG 301 GTGCACTATTGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCCTCTA 361 TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCCCAAAC 481 GGTGCAGACAGACAACCACCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC 541 CAAAATTGTAGAGATTTCTTCAGATATCTCCATTAATGAAGGGAACAATATTAGCCTCAC CTGCATAGCAACTGGTAGACCAGAGCCTACGGTTACTTGGAGACACATCTCTCCCCAAAGC 661 GGTTGGCTTTGTGAGTGAAGACGAATACTTGGAAATTCAGGGGATCACCCGGGAGCAGTC 1 GTTGTGTCCTTCAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGGCAACAC 1 GITGIGICCTICAGCAAAACAGIGGATTTAAATCTCCTIGCACAAGCTTGAGAGCAACAC 121 AAGAAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTTTGGGCAAT GTGCACTATTGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCCTCTA 421 GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGACGAGGGCCCTTACACCTGCTC GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGATGACGAGGGCCCTTACACCTGCTC GGTGCAGACAGACCACCCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC **CAAAATTGTAGAGATTTCTTCAGATATCTCCCATTAATGAAGGGAACAATATTAGCCTCAC** CTGCATAGCAACTGGTAGACCAGAGCCTACGGTTACTTGGAGACACATCTCTCCCAAAGC AGGGGACTACGAGTGCCTCCAATGACGTGGCCGCGCCCGTGGTACGGAGTAAA GGTCACCGTGAACTATCCACCATACATTTCAGAAGCCAAGGGTACAGGTGTCCCCGTGGG CTTCACGGGGCTGGCTGTGTGTCTTCTTCCAAGGAGTGCCCGTGCGCAGCAGCAGATGC TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCAAAC 721 Aggegactacgagtgcagggcctccaatgacgtggccgccgcccgrgtacggagagtaaa ; 100.0%; Score 1679; DB 1; Length 1679; 100.0%; Pred. The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polymucleocides encoding them.

CC transmembrane polypeptides and the PRO polymucleocides encoding them.

Cd diagnostics, blosensors or bioreactors. They are particularly useful for detecting tumour, rectal tumour or liver tumour, in a mammal, for prostate tumour, rectal tumour or liver tumour) in a mammal, for cstimulating the release of tumour necrosis factor (TNF) alpha from human blood, for stimulating the proliferation of or gene conditoryte cells, for stimulating the proliferation of or gene expression in perioyte cells or for stimulating the proliferation of or gene captures; in chromosome and gene mapping, in generating or the PRO nucleic acids are useful as the development and screening of therappeutically useful cells and used in the development and screening of therappeutically useful captures and in generating probes. The PRO polypeptides, or anti-PRO markers and in generating probes. The PRO polypeptides or anti-PRO antibodies, are useful for preparing a medicament for treating or condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as perioyre-associated tumours and bone and/or cartilage condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as perioyre-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the re-disorder electrophoresis, and in tissue typing. This equence represents a human PRO polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CTTCACGGGGCTGGCTGTCTCTTCTTCCAAGGAGTGCCCGTGCGCAGCGGAATGC 240

detecting tunnours (e.g. lung tunnour, colon tunnour, breast tunnour, cetal tunnour or liver tunnour) in a mammal, for prostate tunnour or liver tunnour) in a mammal, for stimulating the release of tunnour necrosis factor (TNP)-alpha from human blood, for stimulating the proliferation of chondrocyte cells, for stimulating the proliferation of or gene capression in perioyre cells or for stimulating the proliferation of or gene correction probes, in chromosome and gene mapping, in generating chybridisation probes, in chromosome and gene mapping, in generating correction, and condition which is preparing PRO polypeptides by recombinant technology, in generating probes. The PRO polypeptides, or anti-PRO may be used in the development and screening of therapeutically useful creagents, in gene therapy, in chromosome identification, as chromosome markers and in generating probes. The PRO polypeptides, or anti-PRO antibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO differentiation of chondrocytes. The PRO polypeptides are useful as condition which is responsive to the PRO polypeptides are useful as disferentiation of chondrocytes. The PRO polypeptides are useful as conditional markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polymoclectide of the invention. Once: The sequence data for this patent can also be obtained in electronic format directly from USPTO at seqdata.uspto.goc/sequence.html. %%GGGGGGGGGGGGGGGGGGGG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes a specifically claimed novel human protein. The novel human protein can be used in therapeutic drugs for the prevention and treatment of a locad range of disorders including autoimmune and infection-related immunodeficiency, inflammatory disorders, and neurological diseases. The novel protein is expected of having haematopoietic cell regularory activity, tissue generation/ reparation activity, activity, inhibin activity, taxis/chemotaxis activity, blood coagulation and thrombus activity, and receptor/ligand activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  184

The clone was initially identified in human foetal brain tissue. The invention provides novel SECX polynucleotides (see AAA88789-804) and the secreted or membrane-associated proteins encoded by them (see AAB19720-34). SECX polynucleotides, polypeptides and antibodies can be used in the detection, diagnosis and treatment (including gene therapy) of a broad range of pathological states
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SECX polypeptides and the nucleic acids that encode them, useful for diagnosing, preventing and treating e.g. cancers, inflammation, arthritis and immunological disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to novel human nucleic acid sequences which encode novel molecule (MOL) proteins numbered MOL1-23, referred to generally in the specification as MOLX. Compounds which modulate the function of the MOLX proteins of the invention, MOLX agonists or antagonists, may have cardiant, antidiabetic or antiatratiosclerotic activities. In addition, the DNA and protein sequences disclosed may prove useful for gene therapy. The protein, nucleic acid or antibody is useful for gene composition for treating or preventing a MOLX-associated disorder, for example cardiomyopathy, diabetes or atherosclerosis. The present sequence is the DNA sequence encoding a MOL protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

```
SECX polypeptides and the nucleic acids that encode them, useful for diagnosing, preventing and treating e.g. cancers, inflammation, arthritis and immunological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  102
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is that of SECX Clone 11753149.0.6, which resembles rat neural cell adhesion molecule neurotrimin and human opioid binding protein/Cell adhesion molecule OBCAM. The clone was initially identified in human feetal brain tissue. The invention provides novel SECX polymucleotides (see AA88789-804) and the secreted or membrane-associated proteins encoded by them (see AAB19720-34). SECX polymucleotides, polypeptides and antibodies can be used in the detection, diagnosis and treatment (including gene therapy) of a broad range of pathological states
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GTCCATAGAGACGAACGAATGAGACCTTCCGGCCCAAGCGTGGCGCTGCGGGGCACTTTG

                                                                                                                                                                   This invention relates to novel human nucleic acid sequences which encode novel molecule (MOL) proteins numbered MOL1-23, referred to generally in the specification as MOLX. Compounds which modulate the function of the MOLX proteins of the invention, MOLX agonists or antagonists, may have cardiant, antidiabetic or antiatrerisoslerotic activities. In addition, the DNA and protein sequences disclosed may prove useful for gene therapy. The protein, nucleic acid or antibody is useful for gene therapy. The protein, nucleic acid or antibody is useful for preparing a composition for treating or preventing a MOLX-associated disorder, for example cardiomyopathy, diabetes or atherosclerosis. The present sequence is the DNA sequence encoding a MOL protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to the human Kruppel associated DNA binding protein 42 and the polynucleotide encoding it. The sequences of the invention are applicable in diagnosis and treatment of different kinds of tumour, haemopathy, HIV infection, nervous system disease, developmental disease, hereditary disease, endocrine system disease, immune system disease, immunological disease and various inflammations. This sequence represents cDNA encoding the human Kruppel associated DNA binding protein 42
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           229
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          213
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           289
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            213

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosupperseate and cyrostatic activity. The polymuclectides are useful in gene therapy. A composition containing a polypeptide or polymuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous injuries, peripheral nervous cost and system diseases, such as lateriable and central nervous system diseases, such as laterial sclerosis, and Shy-Drager Syndome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cceecheeceanahececcaccarcarenechentrandachacceercheceereecreereec 341

Identifying a candidate p53 pathway modulators that are useful as targets for therapeutics or for diagnosing cancers associated with defective p53 function, by providing an assay system having a purified IG polypeptide or nucleic acid.
                                                                                                                                                                                                                                                                                      The invention relates to a novel method for identifying a candidate p53 apthway modulating agent. The method comprises providing an assay system having a purified IG polypeptide or nucleic acid or their functionally active fragment or derivative. The method is useful for identifying modulators of the p53 pathway, particularly for identifying agents for treating disorders (e.g. breast cancer, colon cancer, kidney cancer, lung cancer or cancer of the ovary) associated with defective p53 function. The identified modulators are useful as targets for novel therapeutics. The method is also useful for dispnosing disorders associated with defective p53 function. The IG proteins or nucleic acids are useful as modifiers of the p53 pathway, and as therapeutic targets for disorders associated with defective p53 function. This polynucleotide sequence represents a human nucleic acid relating to the human IG genes used in the assay for identifying modulators of the p53 pathway of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GGTCCACCTCATTGTGCAAGTATCTCCCAAAATTGTAGAAATTTCTTCAGATATTCTCCAT

```

The invention relates to a method for detecting a lung cancer-associated transcript in a cell from a patient, comprising contacting a biological sample from the patient with a polymucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibits increased or decreased expression in lung cancer samples. Lung cancer casciated polymucleotides and polymeptides are used for identifying a compound that modulates a lung cancer-associated polypeptide, for inhibiting proliferation of a lung cancer-associated cell to treat lung cancer in a patient and for treating a mammal having lung cancer by administering a modulatory compound identified. The methods are useful for treating a modulatory compound identified. The methods are useful cancer or other benign or precancerous lessions, e.g. atelectasis, emphysema, bronchitis, chronic obstructive pulmonary disease, fibrosis, hypersensitivity pneumonitis, interetitial pulmonary disease, fibrosis, bypersensitivity pneumonitis, interetitial pulmonary fibrosis, asthma and compounds that modulate lung cancer, such as antibodies. Sequences Lung cancer-associated polynucleotide, gene, ds, cytostatic, emphysema, antiinflammatory; antiasthmatic, non-small cell lung cancer, atelectasis, small cell lung cancer, benign lesion; precancerous lesion; bronchitis; chronic obstructive pulmonary disease; hypersensitivity pneumonitis; interstitial pulmonary fibrosis; fibrosis; asthma, bronchiectasis. Detecting a lung cancer-associated transcript in a cell from a patient for treating lung cancer, by contacting a biological sample from the patient with a polynucleotide that exhibits increased or decreased expression in lung cancer. 345 AGGAGTGCCCGTGCGCAGCGGAGATGCCACCTTCCCCAAAGCTATGGACAACGTGACGG 214 AGGAGTGCCCGTGCGCAGCGGAGATGCCACCTTCCCCAAAGCTATGGACAACGTGACGGT Gaps 20; Length 1839; Sequence 1839 BP; 464 A; 506 C; 503 G; 366 T; 0 U; 0 Other; Score 1442.8; DB 1; Length Pred. The invention relates to human nucleic acids (AAI57798-AAI61169) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymuclectides are useful in gene therapy. A composition containing a polypeptide or polymuclectide or for the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous cost the invention may be used to treat diseases of the peripheral nervous cost is parkinson's disease, Huntington's disease, amyotrophic localised neuropathies and central nervous system disease, amyotrophic alread sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolyty catcivity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemiss and can of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                         400
                                                                                                                                                                                                                                                                                                                                                                                                                        120

                                                                                                                                                             The present sequence encodes a specifically claimed novel human protein. The novel human protein can be used in therapeutic drugs for the prevention and treatment of a broad range of disorders including autoimmune and infection-related immunodeficiency, inflammatory disorders, and neurological diseases. The novel protein is expected of maving haematopoietic cell regulatory activity, tissue generation, reparation activity, activity, activithinin activity, taxis/chemotaxis activity, blood coagulation and thrombus activity, and receptor/ligand activity
